"We truly appreciate all the work that CMiC continues to do to reinvent itself with CMiC Collaborate, which consistently takes project collaboration to a whole new level, matching the needs of an ever-evolving industry."

—Constructech editors

CMiC COLLABORATE

The cloud and collaboration come together for construction. CMiC's Collaborate is a new service that will change how construction companies deliver projects. The platform enables a sharing of project documents, communications, and cost information between general contractors, their partners, and their network of subcontractors.

It also includes two distinct services: Project Gateway and Project Management Exchange. Project Gateway aggregates projects led by general contractors and makes them accessible to all stakeholders, while Project Management Exchange enables the exchange of project administration objects across systems and construction firm venture partners. The construction industry has been clamoring for a platform that connects firms to project partners—and CMiC delivers.
